How I used Bootstrap 5

1. Introduction

This project is a personal portfolio website created using **Bootstrap 5**. The goal was to build a website that is responsive, easy to use on all devices, and visually attractive.

2. Bootstrap 5 Components Used

The following Bootstrap components were used:

- **Navbar** - for responsive navigation on all screen sizes.
- **Grid System** - used to arrange all content in rows and columns.
- **Cards** - used to show skills with images and descriptions.
- **Carousel** - used to display testimonials in a sliding format.
- **Buttons & Progress Bars** - for actions and showing skill levels.
- **Utilities** - used for spacing, alignment, shadows, and text styling.

3. Layout Structure

- The header uses `.container-fluid` to stretch across the screen.
- The main content uses `.container` to keep text readable.
- The About Me section uses two columns on large screens and one column on small screens.
- The Skills section uses a layout that shows 1 column on phones, 2 on tablets, and 3 on desktops.

This makes the website fully responsive.

4. Custom CSS

Custom CSS was used to:

- Increase the size of navigation links.
- Change the style of carousel indicators and arrows.
- Improve colours and borders for better design.

5. Challenges and Solutions

Challenge

Carousel text overlapping on small screens
Cards were different heights
Custom styles not working

Solution

Hidden on small screens and shown differently for mobile.
Used flex and height utilities to make them equal.
Loaded custom CSS after Bootstrap.

6. Learning

- Learned how to use Bootstrap grid and components.
- Improved understanding of responsive design.
- Learned how to fix layout and styling problems.
- Understood the importance of mobile-friendly design.

7. Conclusion

This project helped build confidence in using Bootstrap 5 to create responsive and professional websites and prepared me for future web development projects.
